

SAITEJA PILLUTLA

Senior Salesforce Engineer | [Enterprise Integration & Platform Architecture](#)

Hyderabad, India | saitejapillutla@gmail.com | +91 9493732592 | [LinkedIn](#) | [GitHub](#)

PROFILE

Senior Salesforce Engineer with 5+ years building and owning Salesforce products and platforms across **Amgen, GE Renewable Energy / GE Vernova, and MaxVal**. Strong across Apex/LWC, Experience Cloud, enterprise integrations, identity, asynchronous processing, LDV, and CI/CD. **Takes ownership from architecture through production** and operates as a technology partner to business, architecture, security, integration, and engineering teams - not just an implementation resource.

SALESFORCE CERTIFICATIONS

Salesforce Certified Platform Developer I	Salesforce Certified Administrator
---	------------------------------------

CORE EXPERTISE

Salesforce Engineering: Apex, LWC, Experience Cloud, LWR, Flows, Triggers, Batch Apex, Queueable Apex, Platform Events, CDC, SOQL/SOSL
Integration & Identity: REST/SOAP APIs, HTTP callouts, OAuth 2.0, SAML SSO, Named Credentials, JSON, middleware, async/event-driven patterns
DevOps & Security: GitLab CI/CD, GitHub Actions, Salesforce CLI/SFDX, Git, pull-request governance, secrets scanning, CRUD/FLS, sharing controls
Architecture & Scale: Service-layer patterns, LDV processing, retry/error handling, observability, managed packages, AppExchange security, privacy-by-design, GxP delivery

PROFESSIONAL EXPERIENCE

AMGEN | Product Engineering - Enterprise Biopharma

Sr. Associate IS Engineer | Hyderabad, India

Sep 2025 - Present

- **Re-architected** a customer-facing **Salesforce Experience Cloud** platform across content/data model, ContentDocument/ContentVersion access, permissions, multilingual behavior, market controls, authentication flows, and analytics instrumentation.
- **Owned end-to-end delivery** from requirement shaping and architecture through development, testing, deployment, and production support; partnered directly with business stakeholders, architects, QA, security, identity, AWS, and middleware teams.
- **Designed integration and identity patterns** using **SSO, deep links, OAuth 2.0, REST APIs, Platform Events, Change Data Capture, and Queueable Apex**; act as the team integration technical POC.
- **Transformed release engineering** from infrequent, consolidated manual **ANT deployments to Salesforce CLI + pull requests + GitLab CI/CD**, cutting typical deployment execution from **~2 hours to ~10 minutes**.
- **Defined branching and pull-request strategy** and implemented enterprise governance controls including automated validation, peer review, controlled main-branch promotion, and **secrets scanning**.
- **Expanded platform readiness to two additional country markets** through localization, language behavior, access control, authentication, and deployment design.
- **Led the architectural uplift of a PWA solution** with AWS and MuleSoft engineers, shaping hosting, API security, offline/outbox behavior, middleware, and Salesforce connectivity feasibility.
- **Designed a privacy-preserving erasure workflow** using Platform Events + Queueable Apex to anonymize PII asynchronously, retain required historical records, remove sensitive files, and block future activity; also review two developers and mentor one associate engineer.

MAXVAL GROUP INC | Product Engineering - Salesforce Managed Package

Product Engineer | Bengaluru, India

Jun 2024 - Sep 2025

- **Built and enhanced a multi-tenant Salesforce managed package** for enterprise IP workflows, working within namespace, package upgradeability, security-review, and AppExchange constraints.
- **Developed reusable LWC + ExcelJS capabilities** and Apex service, Batch, and Queueable patterns for large-volume processing, client-side workbook generation, transaction isolation, and failure handling.
- **Designed cross-org REST integrations** for near-real-time synchronization with payload mapping, callout orchestration, authentication, and status/error tracking.
- **Migrated CI/CD from Jenkins to GitHub Actions** and strengthened release controls through branch protection, automated validation, repeatable deployments, CRUD/FLS remediation, static analysis, and AppExchange security readiness.

- **Delivered 3+ Salesforce Experience Cloud portals** using LWR + LWC for renewable-energy partner ecosystems, with reusable component architecture, secure sharing/data models, external-user lifecycle management, and **SAML SSO**.
- **Engineered REST/SOAP integrations** with enterprise order-to-remittance platforms and DocuSign using Apex callouts, serialization/deserialization, asynchronous execution, and resilient error-handling patterns.
- **Designed LDV processing for millions of records** using Batch Apex, SOQL tuning, selective querying, chunked processing, and governor-limit-aware patterns, improving processing performance by **~40%**.
- **Built org-to-org and bulk data integration pipelines** with scalable Apex orchestration, data transformation, async execution, and operational recovery patterns for shared enterprise services.
- **Reduced manual effort / custom-code footprint by ~35%** through Screen Flows, Auto-Launched Flows, formula-driven logic, and declarative automation while retaining Apex for transactionally complex paths.
- **Owned portal security and identity operations** across permission sets, roles, sharing, external-user provisioning/deactivation, access troubleshooting, and backup/governance processes.
- **Implemented source-driven DevOps** with GitHub Actions and Salesforce CLI/SFDX for validation, environment promotion, review controls, and traceable releases; supported auditability and SOX-aligned control requirements.
- **Acted as a technology partner** to functional teams and platform stakeholders - translating business/process problems into scalable Salesforce designs rather than operating as a ticket-only support resource.

- **Administered Salesforce access and configuration** including users, profiles/permission sets, sharing/access requests, formula fields, validation rules, and day-to-day platform configuration under enterprise controls.
- **Built and maintained Salesforce Flows** for user/process automation, reducing repetitive administrative work and improving consistency of operational updates.
- **Supported data quality and platform operations** through field/configuration changes, permission troubleshooting, reporting, and controlled user onboarding/offboarding.
- **Developed Tableau operational dashboards** integrating Microsoft Dynamics 365 and internal data sources; created reusable KPI views and documented dashboard/data-flow architecture for team handoff.

SELECTED PRODUCT & ARCHITECTURE WORK

Salesforce Integration Async Framework | *Personal / Open Source*

- **Built a production-oriented integration framework** with Apex, Queueable Apex, REST callouts, Platform Events, retry/error tracking, lifecycle events, and an LWC monitoring console using separated trigger/service/async/callout/event layers.

Global Experience Platform Modernization | *Enterprise Biopharma*

- **Re-architected a regulated customer-facing Salesforce platform** around secure file/content distribution, localization, access controls, identity flows, event-driven integration, analytics, and automated release engineering across multiple markets.

Offline-First Field PWA & API Architecture | *Enterprise Biopharma*

- **Shaped the Salesforce-facing architecture** for a mobile/tablet PWA with offline outbox behavior, secure cloud hosting, API gateway/middleware patterns, and resilient submission/synchronization flows in collaboration with cloud and middleware engineers.

Renewable Energy Partner Experience Platform | *GE Renewable Energy / GE Vernova*

- **Delivered partner-facing Experience Cloud products** with LWR/LWC, SAML SSO, secure sharing, REST/SOAP integration, large-volume Apex processing, automated user lifecycle, and CI/CD controls.

EDUCATION
